

Proctored online exams your students can **actually** **take.**

Upload your syllabus. Vigil drafts the multiple-choice questions, you review them, and students sit a timed, supervised exam from a normal laptop on a normal connection. A person, not an algorithm, makes every serious decision.

AI question drafting

Timed digital MCQ exams

Camera, mic and screen recording

Human review queue

Appeals

Topic-wise reports

Focused retests

For coaching institutes

Frequent tests, quick paper setting, fair results.

For colleges

Internal assessments with evidence you can stand behind.

For schools

Guardian consent step for exams where a guardian is named.

For training bodies

Certification and screening tests with a clear audit trail.

Why institutes choose Vigil

The paper writes itself

Upload a syllabus PDF or text. AI drafts topic-tagged MCQs with variants. Your faculty edit, approve or reject each one before it can be used.

Fair by design

Camera, eye and face signals only raise a flag for a human reviewer. The only automatic action is cancelling after repeated tab, window, copy, print or screenshot violations, and a person reviews every cancellation.

The server keeps the clock

Exam time, rules and breaks are enforced on the server, not in the student's browser, so a modified browser cannot stretch the time.

Built for everyday connections

Runs in Chrome or Edge on a laptop or desktop with a camera. Recordings upload in small segments and retry if the network drops.

Privacy first

Face and gaze detection run on the student's own device. Only numbers from those checks are stored. Recordings are removed after a retention period you set. A plain-language privacy page is shown to every student.

Learning, not just policing

After the exam students see a topic-wise report and can take a focused retest on the topics they missed.

Integrity and identity checks (choose what applies to each exam)

- Photo ID, selfie and room scan before the clock starts, with an optional face-match hint for the reviewer
- Roster-based student keys, invite links and one-time passwords by email or SMS
- Fullscreen and tab-switch monitoring, copy, paste, print and screenshot warnings
- Fixed breaks that lock answered questions; a "technical problem" pause that stops the clock without penalty
- Optional rough-work mode for paper notebooks: glances down are recorded for the reviewer to judge
- Extra-time settings for students who need accommodations; accessible exam view for assistive technology

How Vigil works

- 1 Create the question bank**
Upload the syllabus. Vigil drafts MCQs by topic. Your faculty review, edit and approve. Add images if you need diagrams.
- 2 Set up the exam**
Choose duration, number of questions, breaks, identity checks and retest rules. Import your roster; students get personal keys or invite links.
- 3 Students join and get checked**
They read a clear consent screen, verify with a one-time code, and complete camera, microphone, ID and room checks.
- 4 The exam runs under supervision**
A server-timed paper, with the camera, microphone and screen recording and on-device eye and face checks. Warnings are shown plainly to the student.
- 5 Humans review the flags**
Flagged attempts go to a review queue with the recording and timeline. Reviewers clear, confirm or cancel. Students can appeal, and a reviewer can reinstate.
- 6 Results and insight**
Scores, CSV export, item analysis showing which questions worked, and a topic report so teachers see where the class is weak.

Coming next: Vigil Sparks

Short, teacher-approved explainer scripts (60 seconds or less) for the topics students miss. Currently in pilot.

Trust, privacy and support

Consent and notice

Students see what is recorded and why before they begin. Consent is versioned, and a guardian consent step is available for exams with a named guardian.

Controlled access

Admin sign-in with lockout protection, rate limits, strict browser security policy, verified file uploads and an audit trail of reviewer actions.

Your data, your retention

Set how long recordings are kept. Delete an attempt or its media on request.

Pilot with us

We run a small pilot with your team, tune the settings with you, and report how often flags were overturned so you can judge fairness for yourselves.

What you need

- Students: a laptop or desktop with Chrome or Edge, a webcam and a microphone
- Staff: a browser. No installation, no servers to manage
- Languages: questions in the language of your syllabus

See it live

We will walk you through a complete exam, from syllabus upload to the reviewer dashboard, in a 30-minute online session at a time that suits you.
